PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER | RED HAT

June 2024 - present | Raleigh, NC

Ansible Cloud Automation

- Established comprehensive API lifecycle standards for Automation Orchestrator from blank slate to production enforcement, including versioning policy and deprecation strategy adopted platform-wide across AAP product line
- Built automated API compliance testing framework with CI enforcement, preventing API contract drift and shifting governance from manual code review to proactive validation
- Designed and delivered complete HashiCorp Vault database static role management suite: authored three production modules with comprehensive test coverage, enabling AAP content developers to automate database credential rotation using Infrastructure-as-Code
- Developed open-source MCP integration demonstration showcasing Ansible plugin framework with Execution Environments, serving as reference implementation for community adoption
- Fixed high-impact SSM session leak bug preventing resource exhaustion on Ansible controllers during looped tasks

AI Model Serving & Observability

- Spearheaded the implementation of a critical pause-and-resume feature for Kserve models, enabling more efficient resource management and cost savings
- Engineered stability and observability features for LLM-D inference services by implementing robust API schema validation and aggregating backend pool statuses, simplifying debugging and enabling reliable automation
- Resolved numerous high-impact bugs and CVEs, enhancing product security and stability across multiple releases
- Established comprehensive documentation from scratch for previously undocumented processes including source synchronization local e2e testing, and release procedures, reducing onboarding time and improving team efficiency

RESEARCH AND DEVELOPMENT ENGINEER | KITWARE, INC.

May 2020 - May 2024 | Carrboro, NC

- Head programmer and scrum master on the DARPA PTG Kitware team
- Conducted machine learning experiments and presented findings to inform team technical decisions
- Integrated machine learning models into ROS system for real-time deployment and testing
- Containerized and integrated disinformation analytics into APIs for evaluation on the DARPA SemaFor project
- Led the code review process on multiple teams, including teaching new interns about best software practices, the code review process, and agile development as the Intern Team Leader

RESEARCH

TARS, TERASCALE ALL-SENSING RESEARCH STUDIO

October 2017 - May 2022 | Clarkson University

- Developed tools to allow the allocation of nodes in a drone cluster to be determined by hardware quality and additional resources such as cameras [M.S. Thesis]
- Led a multidisciplinary 7 person team on creating the hardware and software architecture of an assistive robot prototype [Honors Thesis]

EDUCATION

CLARKSON UNIVERSITY

M.S. Computer Science

May 2022 | Potsdam, NY

- Summa cum laude

B.S. Computer Science Minor in Mathematics

May 2020 | Potsdam, NY

- Honors Program
- Magna cum laude

SKILLS

PROGRAMMING LANGUAGES

Python | Golang | Docker

SOFTWARE EXPERIENCE

Ansible | AWS Services |
Kubernetes | Openshift |
Model Context Protocol (MCP) |
AI-Assisted Development |
Overleaf/LaTeX |
Git/Github | UNIX/Linux

TECHNICAL EXPERIENCE

Software Engineering
REST API Design
Open Source Development
Agile Development
Containerization

PRESENTATIONS

RED HAT SUMMIT 2026

"A ROBUST ANSIBLE PLUGIN
FRAMEWORK FOR EMBEDDING
MCP SERVERS INTO EXECUTION
ENVIRONMENTS"

40-minute technical breakout to
100+ attendees. Generated
direct customer engagement and
leadership recognition.

FLORIDA VIRTUAL SUMMIT 2026

"MCP IN ANSIBLE: FROM
PLAYBOOKS TO AI-POWERED
ORCHESTRATOR WORKFLOWS"

Selected as sole Ansible speaker.
Presented to 50+ attendees
from strategic enterprise
accounts.
